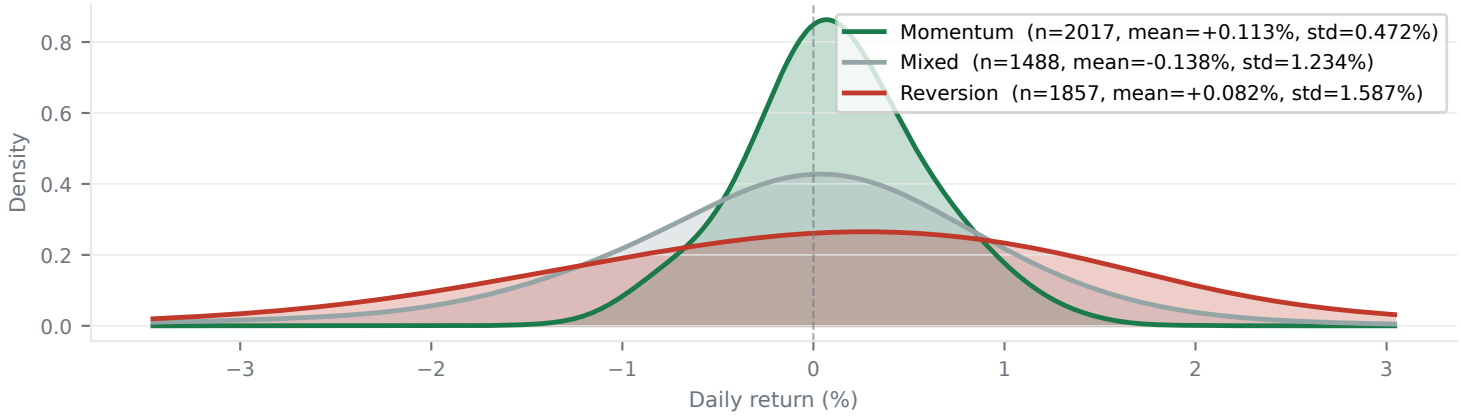
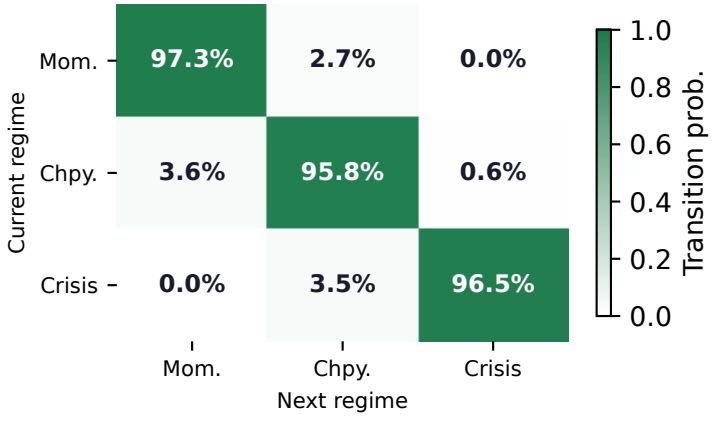
Regime Ensemble - Technical Report

Return Distributions by Regime (Kernel Density Estimate)



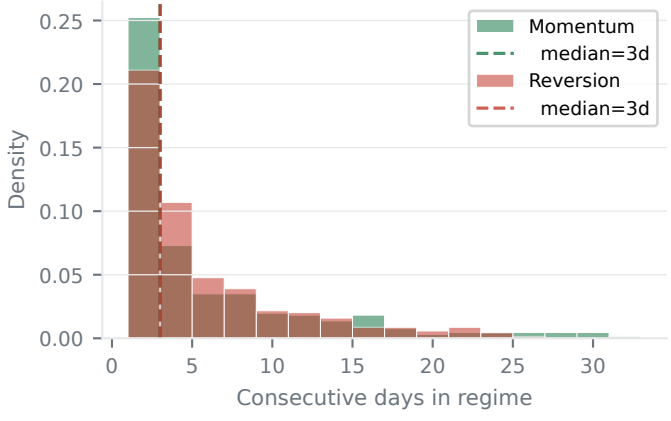
K-S momentum vs reversion: D=0.236, p=0.0000 | K-S momentum vs mixed: D=0.191, p=0.0000

Markov Transition Matrix



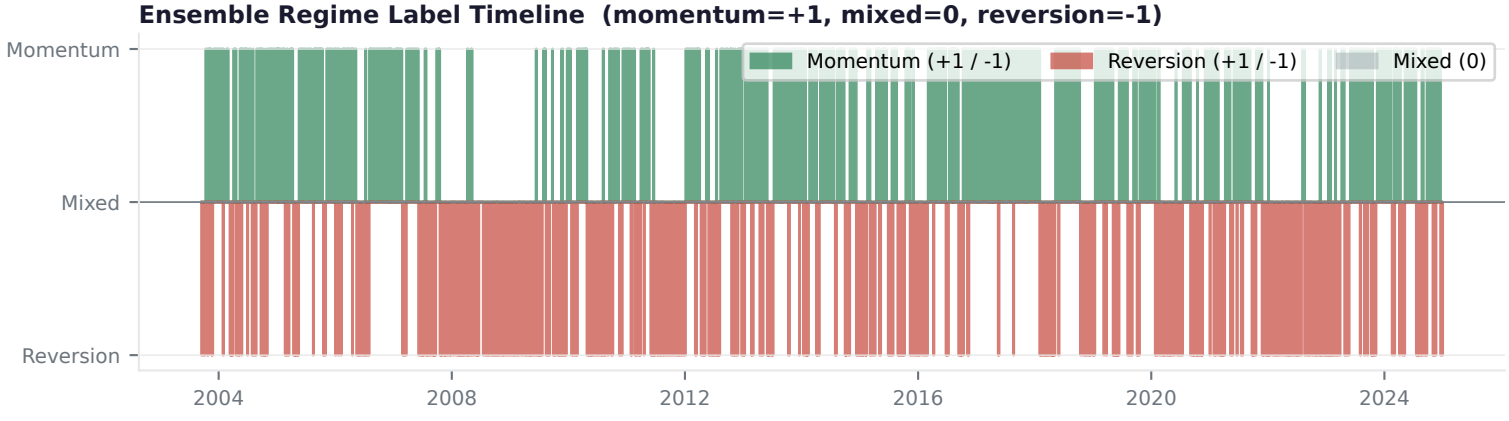
Diagonal = regime persistence. High diagonal = sticky regimes.

Regime Sojourn Time Distribution

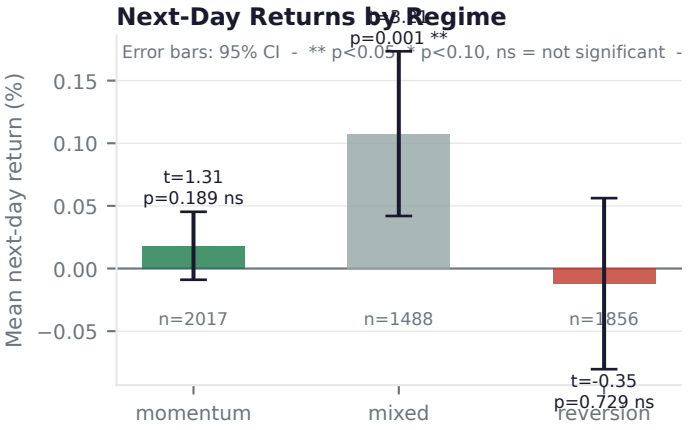


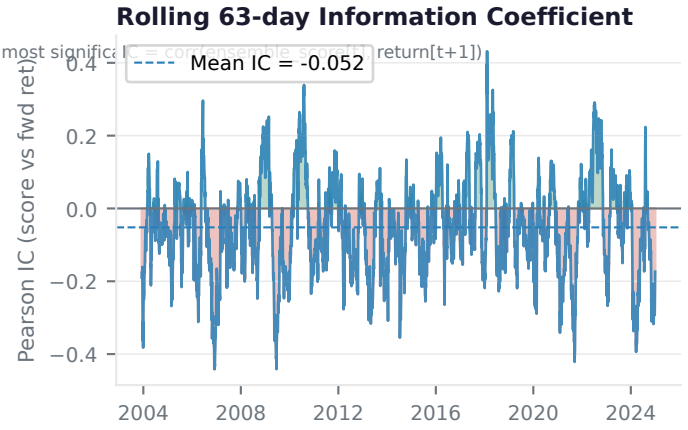
Short sojourn -> fast flip -> higher turnover -> cost drag.

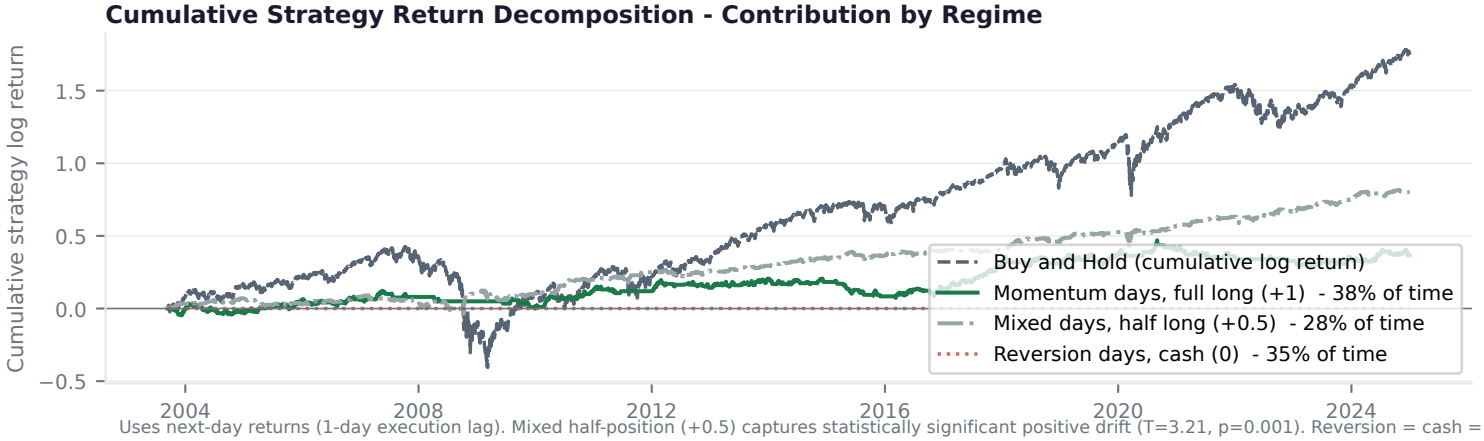
Ensemble Regime Label Timeline (momentum=+1, mixed=0, reversion=-1)



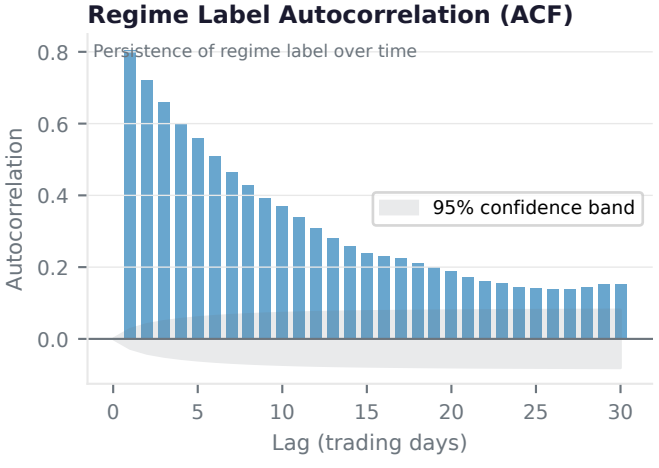
Regime Ensemble - Technical Report

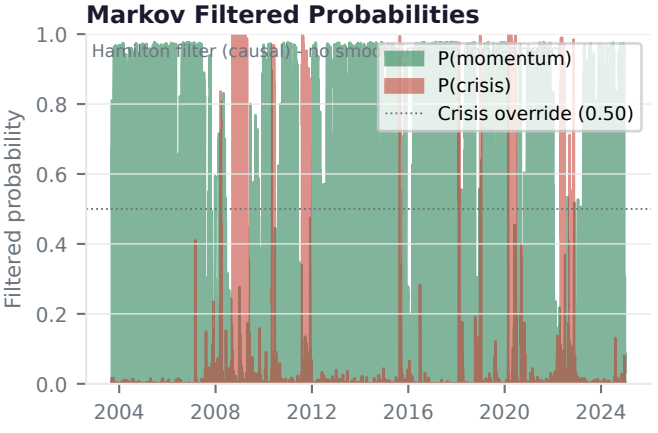






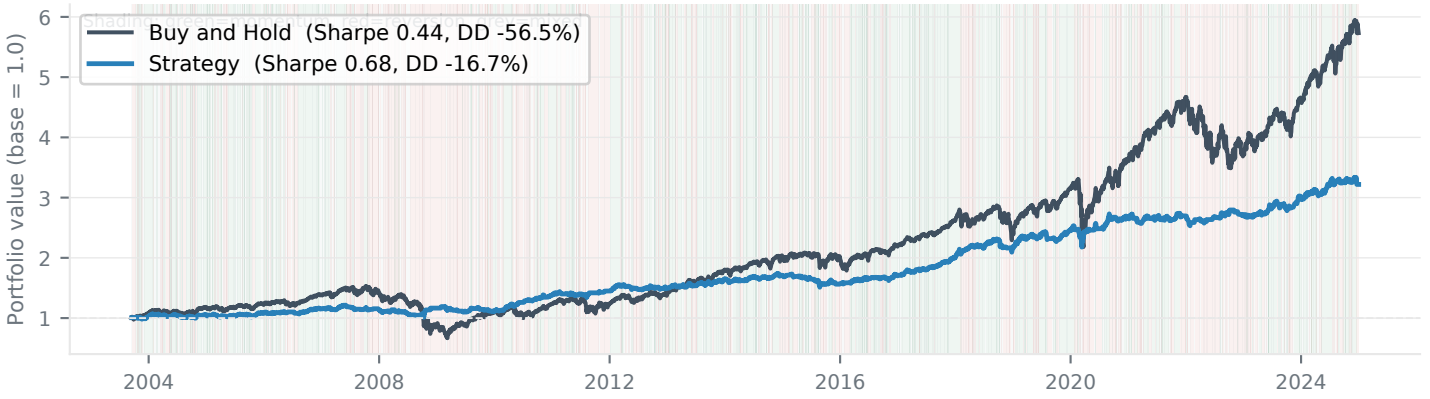
Uses next-day returns (1-day execution lag). Mixed half-position (+0.5) captures statistically significant positive drift (T=3.21, p=0.001). Reversion = cash = flat line.



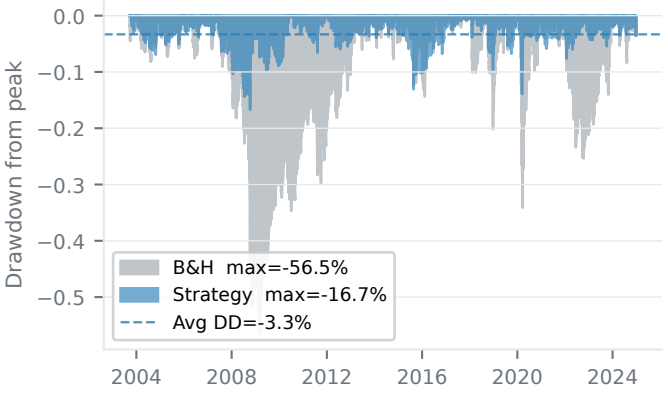


Regime Ensemble - Technical Report

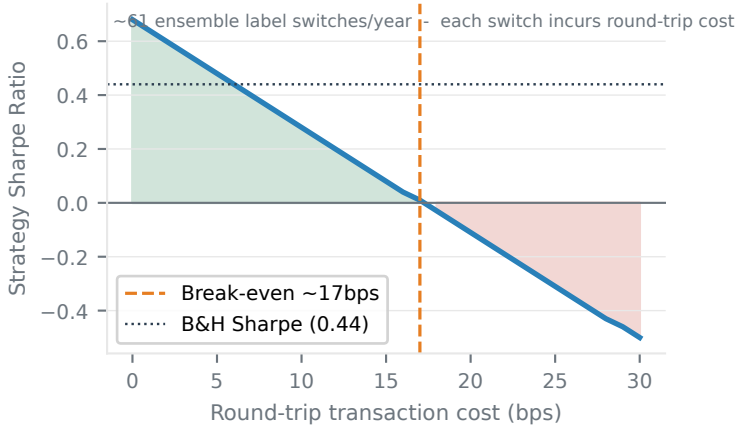
Equity Curves - Regime-Shaded Background (0 bps, 1-day lag)



Underwater Drawdown



Sharpe vs Transaction Cost (0-30 bps)



Full Performance Attribution (SPY 2000-2025, 0 bps)

Metric	Strategy	Buy and Hold
CAGR	**+5.7%**	+8.6%
